SUMMARY

Gameplay Engineer with a unique blend of expertise across PC/Mobile/Web development, Backend architecture, and immersive 2D and 3D game design. Proven track record of building robust, cross-platform applications, engineering real-time multiplayer systems, and driving creative visual pipeline.

TECHNICAL SKILLS

Languages: C#, C++, JavaScript, Unreal Blueprints

Game Engines & Tools: Unity Engine, Unreal Engine, VS Code, Photon, Git, Version Control

Optimization & UI: Profiling Tools, Unity UI, DoTween, Frame-rate Optimization, Hierarchy Performance

PROFESSIONAL EXPERIENCE

Inuv8 Studios | *Gameplay Systems Designer*

2022 – Present

- Architected core gameplay mechanics, custom character ability systems, enemy state machines, and AI logic.
- Designed and implemented an exploration mechanics, traversal systems, and a custom localization architecture.
- Optimized runtime game performance using Unity Profiler and frame-budget analysis across target platforms.
- Conducted code reviews, established coding standards to maintain a clean, modular codebase.

BRN Metaverse | *Gameplay Programmer*

2021 – 2023

- Engineered real-time multiplayer features and room management using Photon PUN.
- Implemented modular progression systems, player mechanics, and dynamic touch/mobile controls.
- Integrated backend services including in-game currency, PlayFab, and cloud data synchronization.

Redshield Games | *Junior Gameplay Programmer*

2020 – 2022

- Contributed to character movement mechanics, rapid gameplay prototypes, and Finite state machine behaviors.
- Implemented networked game states, RPCs, and authority synchronization using Custom Netcode.
- Supported network performance profiling, bug fixing, and multiplayer latency testing across clients.

Pinheads Interactive | *Contract Game Developer (AI Systems)*

2019 – 2021

- Designed reusable AI behavior trees, pathfinding, and combat logic for non-player characters (NPCs) in systems-driven environments.
- Profiled and optimized pathfinding and AI runtime calculations across mobile and desktop performance targets.

NOTABLE PROJECTS & CUSTOM TOOLS

- **Custom Ability System Framework:** Built a modular, data-driven Gameplay Ability System (GAS-inspired) in Unity (C#) to support decoupled skill execution, cooldown logic, resource costs, and status effects.
- **Arc Toolkit (Custom Game Architecture Framework):** Engineered a modular suite of developer tools to streamline gameplay and engine integrations:
 - **ArcWeb3:** Built custom Unity Editor tools, C# managers, and JavaScript interop bridges for Web3 integration, enabling smart contract execution, NFT minting workflows, and multi-network bridging.
 - **ArcNet:** Designed a flexible networking solution supporting both Peer-to-Peer (Client-Host) and Server-Authoritative topologies, optimized for real-time state synchronization in small-scale multiplayer games.
 - **ArcBehaviour:** Designed scalable finite state machines (FSMs) and modular behavior trees to handle complex AI logic, combat systems, and NPC pathfinding.
 - **ArcStory:** Implemented dynamic narrative pipelines and custom localization architecture to drive branching dialogue, story events, and quest progression.

EDUCATION

Obafemi Awolowo University

Ile-Ife, Osun, Nigeria

Bachelor of Science in Electronics Engineering
